2. The student will enter their last name, midterm and final exam scores (0 – 100 points). Compute
the total exam points to be the sum of 40% of midterm and 60% of the final exam. Display student last name and total exam points.

Input	Processing	Output
Last name as string Midterm score as float Final exam as float	Total exam points = (midterm_score*.4)+(final_exam_score * .6)	Name Total exam points
