5. Allow the user to enter a radius of a circle. Compute and display the area to be pi times radius
squared (use 3.14 for pi and multiple radius time radius for radius squared). Also, compute and display the perimeter (2 times pi * radius)

Input	Processing	Output
Radius as float	Perimeter = 2*3.14*radius Area = 3.14*radius*radius	perimeter float 2 decimal places Area float 2 decimal places
