Input the purchase price per share, the current stock price and quantity of stock, compute the increase (or decrease) of the value of the stock entered. (Value is computed as (current price – price per share) * quantity. If the amount is negative that means you are losing money).

Input	Process	Output
purchase price per share as float Current price as float Quantity as float (if partial stocks were bought)	Net = (current - purchase price)*quantity	Net as float
